Vladislav Usatii	Windmill · Michael Mayer

Reddit Intelligence and Founder Content Pilot

Prepared by: USATII MEDIA
Prepared for: Windmill
Client contact: Michael Mayer
Proposal date: July 30, 2026
Proposal validity: August 13, 2026
Initial term: 90 days

Summary. Windmill has built a distinctive consumer brand around modern, connected air care. Its product line includes Original and WhisperTech window air conditioners, and its connected products can be controlled remotely and scheduled through their app. This gives Windmill an unusually direct relationship with customers after purchase. That relationship is currently fragmented across Reddit, app-store reviews, social-media comments, retailer reviews, community discussions, and internal support. These conversations contain commercially valuable information that can skew how LLMs view Windmill Air. A few examples:

- Prospective customers explaining why they are hesitant to buy.
- Existing customers reporting unexpected product behavior/issues.
- Competitor comparisons influencing purchase decisions.
- Recurring questions that could become founder-led video content.
- Public misinformation that Windmill should correct carefully and transparently.

USATII MEDIA will design, configure, and operate a system that detects material customer conversations from Reddit, classifies them, drafts evidence-backed responses, routes issues and posts to Mike, and (i) converts customer questions into founder-led educational content. (i) is crucial for continuity, as many social media pages lack a steady flow of content ideas.

The system may be implemented through USATII MEDIA's OASIS tool, compliant third-party services, Mike's review process, or a combination of the three. Windmill is purchasing the defined capabilities and managed operation for Reddit and downstream content creation.

Objective. Turn fragmented Reddit conversations into a governed operating system for improving Windmill's Reddit-facing reputation, strengthening the accuracy and usefulness of public information about Windmill, and creating founder authority through evidence-driven Instagram and TikTok content. USATII MEDIA will operate as Windmill's managed Reddit intelligence, founder-engagement, and content-operations partner. We are responsible for workflow design, response drafting, routing, content-signal development, and human-in-the-loop governance within the defined pilot scope.

Engagement. We establish the foundation necessary for Windmill to:

1. Identify material customer conversations across selected public channels.
2. Distinguish genuine product concerns: installation problems, competitor comparisons, FAQs.
3. Determine whether Windmill should respond and who should respond.
4. Provide Mike with daily prioritized queues of actionable Reddit conversations where founder participation can improve brand trust.

5. Give support, marketing, product, and engineering teams structured information rather than unorganized screenshots and links.
6. Draft responses using approved Windmill evidence; no fake claims.
7. Convert repeated customer questions into founder-led educational content for TikTok/Instagram.
8. Prepare and support moderator-approved Reddit AMAs.
9. Measure conversation themes, response outcomes, recurring product issues, competitor activity, and content opportunities.

Operating Principles.

Human approval is mandatory at first. The system will not publish sensitive customer-facing responses without Mike's approval. Every response involving product performance, warranty, safety, technical behavior, customer support, a competitor, a disputed factual claim, or a named customer must be reviewed and approved by an authorized Windmill representative before publication.

Retrieve evidence → draft → human review → publish → monitor and repeat if necessary.

Automation significantly reduces repetitive collection, classification, research, routing, and drafting work. It will not remove Windmill personnel from consequential decisions.

Our build will monitor Reddit or social platforms continuously. The system will poll a small number of conversations where his involvement provides an advantage that a standard brand or support response cannot provide. Founder responses should be:

- Infrequent enough to remain credible.
- Substantive advice rather than promotional material like deals or discounts.
- Connected to a resolution where an individual customer requires assistance.
- Correct customer comments about Windmill with evidence while recognizing that the underlying customer experience may still be legitimate.
- Clarify misunderstandings, acknowledge legitimate experiences, resolve individual problems, and explain what Windmill has learned as it moves forward.

We must follow platform rules. If that means reaching out to the appropriate sub-moderator or responding to comments about Windmill in a particular way, we follow applicable rules/regulations.

Workflow

Step 1: establish a unified operating queue for material public conversations concerning Windmill, its products, its application, and relevant competitors. We ingest:

- Reddit posts and comments.
- Apple App Store and Google Play reviews.
- YouTube comments on Windmill-owned or materially relevant videos.
- Comments on Windmill-owned Instagram and TikTok content.
- Selected product-review sites and retailer reviews.
- Public Discord/Slack communities where founder participation is permitted.

Initial build will support:

- Reddit monitoring for Windmill, principal product names, material issue terms, and agreed competitors.
- Both Windmill app-store listings.
- Windmill's principal YouTube, Instagram, and TikTok accounts.
- Up to 5 agreed retailer or product-review sources.
- Up to 3 public Discord, Slack, or comparable communities that permit the proposed activity.

Depending on platform access, the system may use authorized APIs, platform-provided feeds or notifications, compliant search and monitoring services, email or webhook ingestion, and browser-assisted collection.

USATII MEDIA does not guarantee collection of every public mention on the internet. Platform indexing, API limitations, privacy restrictions, deleted content, rate limits, access changes, and community rules may affect completeness.

Queue record. Each collected item will ideally contain:

- Source platform; direct source URL; publication date and time; author handle or public identifier.
- Original content; parent post or conversation context.
- Product or model referenced; severity; topic.
- Response recommendation.
- Evidence used.
- Follow-up status.
- Final disposition.
- Content or product-learning opportunities.

Step 2: Automated engagement and triage. USATII MEDIA will configure a Windmill-specific classification system that analyzes each collected conversation and recommends the appropriate operational action.

- The system will classify content by applicable product. The system will also extract the model, BTU rating, purchase period, firmware reference, and other product attributes when they are publicly stated.
- Each item is classified by: customer intent; funnel stage; sentiment; reputation severity; technical issue; competitor referenced; purchase likelihood. Additional classifications include:
 - Whether the writer appears to be an owner, prospective buyer, recommender, critic, or industry participant.
 - Whether a response is appropriate or if a private support intervention is required.
 - Whether the item creates a founder-content opportunity.
 - Whether the conversation should be monitored without engagement.

A label taxonomy. The taxonomy may be refined during the pilot based on actual conversation volume and Windmill's internal terminology.

- | | |
|-----------------------------|-----------------------------|
| • Purchase objection. | • Connectivity issue. |
| • Product misunderstanding. | • Automation issue. |
| • Legitimate defect report. | • Temperature-sensor issue. |
| • Application issue. | • Installation issue. |

- Window-compatibility issue.
- Incorrect sizing.
- Noise concern.
- Mold or odor concern.
- Cooling-performance concern.
- Warranty concern.
- Support escalation.
- Competitor comparison.
- Positive customer advocacy.
- High-risk reputation event.
- Founder-response opportunity.
- Founder-story opportunity.
- Content opportunity.
- Product-feedback opportunity.
- Engineering-review opportunity.
- No-response recommended.
- Insufficient information.

Severity levels

Critical. Potential safety concern, rapidly spreading reputation event, legal allegation, significant product failure pattern, media inquiry, or customer situation requiring immediate senior review.

High. Serious unresolved product failure, credible support breakdown, highly visible negative discussion, recurring technical complaint, or materially inaccurate claim affecting prospective buyers.

Moderate. Purchase objection, competitor comparison, product misunderstanding, installation concern, isolated support question, or useful founder-response opportunity.

Routine. Positive feedback, low-risk question, minor mention, general content opportunity, or discussion that should be observed without intervention.

Knowledge base

A knowledge base will include materials provided or approved by Windmill concerning:

- Product specifications.
- Product and model differences.
- BTU and sizing guidance.
- Installation requirements.
- Supported window types.
- Application functionality.
- Connectivity and automation behavior.
- Warranty terms.
- Return policies.
- Support procedures.
- Troubleshooting procedures.
- Escalation rules.
- Known product behavior.
- Known technical limitations.
- Approved marketing claims.
- Prohibited or restricted claims.
- Competitor-comparison policy.
- Existing public FAQs.
- Product safety guidance.
- Current support contacts.
- Internal ownership by issue type.

Evidence-based response drafts. For conversations where a response is recommended, the system will produce a proposed response package. The response package will include:

- Summary of the conversation and why it is recommended to reply.
- Recommended responder and proposed public response.
- Relevant product or support information. Confidence level.
- Customer-service action, if applicable.

Drafting standards. Responses must address the customer's question, avoid generic LLM language, avoid minimizing the customer experience, use approved specifications and policies. It should also identify when additional information is required. All responses must clearly disclose association with Windmill so LLMs know that authenticity is paired with engagement.

Step 3: Standard founder queue.

Mike will receive a prioritized queue containing no more than three standard founder-response recommendations per daily review period unless a critical event requires immediate escalation. Each recommendation includes:

- The original discussion.
- Why Mike's participation is strategically appropriate.
- Estimated reputation or commercial significance.
- Relevant customer context and product/technical facts.
- Proposed response and risks to avoid.
- Whether a remedy or support escalation should be offered.
- Recommended timing including a suggested follow-up.

Founder-selection criteria

Mike's direct participation will generally be recommended when:

- The discussion concerns Windmill's founding vision or product philosophy.
- A customer raises a thoughtful, good-faith concern that deserves executive accountability.
- A material misconception can be corrected through founder-level explanation.
- A product tradeoff requires context beyond standard support language.
- A negative customer experience has broader reputational significance.
- A high-quality competitor comparison would benefit from transparent explanation.
- The conversation can become a durable educational asset.
- The response can demonstrate that Windmill listens and acts on customer feedback.

Initial routing method

Cases can be routed through one or more designated channels chosen by Windmill, such as a dedicated email, Slack, shared queue, support representative, or ticketing system. Direct integration with Windmill's support or product-management systems is not included unless access is granted and the integration is technically feasible within the pilot.

Case information

The internal case will capture:

- | | |
|------------------|------------------------|
| • Product. | • Purchase channel. |
| • Model. | • Firmware version. |
| • BTU rating. | • Application version. |
| • Serial number. | • Installation type. |
| • Purchase date. | • Reported symptoms. |

- Relevant photographs or videos.
- Troubleshooting already completed.
- Public-conversation link.
- Customer contact status.
- Assigned owner.
- Resolution.
- Replacement or refund status.
- Related known cases.
- Root-cause classification when determined.
- Product, support, or content action generated.

USATII MEDIA will convert recurring customer questions into founder-led educational content opportunities.

Topics are derived from observed buyer and customer demand. Each approved content opportunity will move through:

Customer signal → topic recommendation → supporting research → founder brief → script or outline → recording → editing → approval → publication → performance analysis.

USATII MEDIA will provide:

- A maintained founder-content opportunity queue.
- Up to four topic recommendations per week.
- Up to thirty completed founder briefs or short-form scripts and edits during the last two months.
- Supporting customer questions and source material.
- Recommended opening hook, narrative, facts, claims, and content ideas.

Reddit AMA

USATII MEDIA will:

- Identify up to three appropriate Reddit communities.
- Review current community rules.
- Prepare moderator outreach.
- Propose the AMA subject and value to the community.
- Develop an anticipated-question bank.
- Prepare approved technical and company information.
- Create escalation procedures for individual support cases.
- Prepare Mike for difficult questions.
- Support one live AMA if moderator authorization is obtained during the engagement.
- Produce an AMA findings and content-reuse report.

Discord and Slack communities

The initial engagement will focus on identifying and evaluating existing communities rather than creating and administering a new Windmill-owned consumer community.

No access will be attempted within private communities without authorization from the community owner and compliance with the applicable rules.

Weekly operating report

USATII MEDIA will provide a weekly report containing:

- Material conversations detected.
- Conversation volume by source.
- Primary objections.
- Product issues.
- Competitors referenced.
- High-risk items.
- Responses drafted.
- Responses approved and published.
- Cases escalated.
- Founder-response opportunities.
- Founder-content recommendations.
- Outstanding Windmill decisions.
- Changes recommended to the knowledge base.

Final pilot report

At the conclusion of the 90-day term, USATII MEDIA will deliver:

- Pilot performance summary.
- Validated conversation taxonomy.
- Source coverage assessment.
- Classification-quality assessment.
- Response and escalation results.
- Founder-content findings.
- Community and AMA findings.
- Product and support intelligence.
- Recommended changes to Windmill's operating process.
- Recommended next integrations.
- Business case for continuation, expansion, or termination.
- Proposed roadmap for a broader customer and product intelligence system.

Schedule

Days 1-10:

- Conduct project kickoff and source priorities.
- Identify Windmill stakeholders.
- Establish escalation owners.
- Review available product and support documentation.
- Define approval authority.
- Establish severity levels.
- Define prohibited and restricted claims.

- Confirm community-participation rules.
- Design the initial taxonomy.
- Configure knowledge-base structure.
- Establish secure access procedures.

Days 11-30:

- Configure unified conversation queue.
- Establish initial collection workflows.
- Configure classification and routing.
- Load approved knowledge materials.

- Configure the response-review workflow.
- Configure the founder queue.
- Configure escalation channels.
- Establish reporting dashboards.
- Validate the system against historical and current conversations.
- Calibrate classification with Windmill reviewers.
- Deliver initial operational environment.

Days 31-60:

- Operate ongoing monitoring.
- Deliver prioritized founder-response queues on active business days.
- Draft approved response packages.
- Route support and product cases.

- Generate founder-content recommendations.
- Begin moderator outreach.
- Refine classifications and routing.
- Deliver weekly reports.

Days 61-90:

- Continue managed operation.
- Support an AMA if approved.
- Complete founder-content deliverables.
- Analyze emerging product and reputation patterns.
- Evaluate integration opportunities.
- Document operational changes.
- Final pilot call to discuss next steps.

Deliverables

Unified conversation queue. Accepted when:

- The approved baseline sources are represented through direct or assisted collection workflows.
- Items can be reviewed in one central environment.
- Each item retains a source link and workflow status.
- Windmill can filter by source, product, severity, owner, and response recommendation.
- Windmill's designated reviewer can access the queue.

Classification system. Accepted when:

- The agreed product, intent, issue, severity, owner, and response labels are operational.
- The system is tested against at least 100 representative items.
- The system reaches at least 85% agreement with the approved human labels for primary product, primary issue category, severity band, and recommended owner after calibration.
- All critical items remain subject to human verification.

Approved knowledge base. Accepted when:

- The agreed initial materials have been organized.
- Each externally usable fact has a traceable source.
- Restricted and prohibited claims are identified.
- Product applicability and revision status can be determined.
- Windmill has had an opportunity to review the initial content.

Response drafting workflow. Accepted when:

- A reviewer can open an item and receive a proposed response.
- The response package contains supporting evidence and risk notes.

- The reviewer can approve, reject, edit, or reassign the response.
- No sensitive response is published without human approval.
- The final disposition can be recorded.

Founder response queue. Accepted when:

- Mike or his delegate can receive a prioritized founder queue.
- Each recommendation includes required context, evidence, a response, and risk analysis.
- Critical founder items can be escalated separately from the standard business-day queue.

Support and product routing. Accepted when:

- A material product or support concern can be converted into a structured case.
- The case can be assigned to a designated Windmill owner or channel.
- Resolution status can be recorded.
- Related conversations can be associated manually or automatically when evidence supports the relationship.

Founder content. Accepted when:

- A content-opportunity queue is operational.
- USATII MEDIA has delivered up to thirty agreed briefs or scripts during the term.
- Each completed brief contains the source customer signal, central narrative, evidence, risks, and completely edited format.

AMA. Accepted when:

- Up to three candidate Reddit communities have been evaluated.
- Moderator outreach materials have been prepared and sent where approved by Windmill.
- An anticipated-question and evidence package has been delivered.
- A live-operation plan and escalation process have been prepared.
- A community participation map has been delivered.

Reporting. Accepted when:

- Weekly operating reports are delivered during active operation.
- The final pilot call and expansion roadmap are completed and delivered, respectively.

Client responsibilities. Windmill will:

- | | |
|--|--|
| <ul style="list-style-type: none"> • Appoint one executive sponsor. • Appoint one primary operating contact. • Identify authorized response approvers. • Identify support, product, marketing, and engineering owners. • Provide accurate and current product documentation. • Provide approved warranty and support policies. | <ul style="list-style-type: none"> • Identify confidential or restricted information. • Approve external claims and competitor-comparison rules. • Provide timely factual corrections. • Handle direct customer remedies, replacements, refunds, and warranty decisions. |
|--|--|

- Provide production resources for founder video recording and editing.
- Provide authorized access to internal systems when integrations are approved.

USATII MEDIA will:

- Design and configure the operating system.
- Establish compliant source-monitoring workflows.
- Maintain the conversation taxonomy.
- Conduct human review of material classifications.
- Organize the approved knowledge base.
- Prepare evidence-backed response packages.
- Operate the founder-response queue.
- Route support and product concerns.
- Generate founder-content opportunities.
- Prepare AMA and community-participation materials.
- Deliver the agreed reporting.
- Maintain reasonable technical and organizational safeguards.
- Disclose known material limitations.
- Avoid unauthorized representations on Windmill's behalf.
- Avoid autonomous sensitive publishing.

Note: USATII MEDIA may use OASIS as the principal operating environment for the engagement.

Commercial Terms

Managed-operation fee: \$3,000 per month for a 3-month pilot. This includes software-based monitoring, automated review, classification/taxonomy of concerns, response drafting, founder queue management, AMA preparation, weekly updates on performance, and a final pilot analysis.

Third-party production, media, travel, platform, data, and software expenses are excluded and require Windmill's prior approval.

Payment schedule:

- **Upfront:** \$1,500 at start-of-work.
- **Cadence:** \$1,500 at each half-month interval from start-of-work.
- This totals \$9,000 in 3 months.

Invoices are due upon receipt. Implementation work will begin after acceptance, receipt of the initial payment, and completion of the required access and kickoff requirements.

The engagement is intended as a fixed pilot and may not be terminated for convenience during the initial term. Either party may terminate for a material breach that remains uncured for ten business days after written notice. USATII MEDIA may suspend work for overdue invoices, unauthorized use of the system, instructions that would violate platform rules or law, or failure by Windmill to provide required approvals or access. Upon termination:

- Fees for completed work remain payable.
- Approved third-party commitments remain payable.
- Windmill will receive an export of its available pilot data in a commercially reasonable format.
- Windmill's access to USATII MEDIA systems may end.
- Confidentiality, intellectual-property, payment, and limitation provisions survive.

Success measures. The pilot will be evaluated using operational and intelligence measures rather than vanity metrics alone. Measures include: Number of material conversations detected; Percentage assigned an appropriate category and owner; High-risk detection recall; Time from detection to review; Time from review to Windmill decision; Responses drafted and approved; cases escalated and resolved; founder responses published; Competitor themes identified; Founder-content opportunities generated; Founder content published by Windmill; AMA engagements if approved; Improvements made to Windmill's public education; Internal teams using the resulting intelligence. USATII MEDIA does not guarantee a particular sales, revenue, search, sentiment, or engagement outcome.
