

Corporate capabilities

Custom software built around your operation.

PRODUCT

DATA + AI

OPERATIONS

GOVERNANCE

We build systems that power operations.

For the last half-decade, Usatii has helped businesses build operations software and bring critical workflows in-house.

ONE

Operating partner

Learn

Document the current process with your team.

Ship

Put working software in front of users.

What we build

Core systems for daily operations.

01 **Products**

Customer and employee applications

02 **Integrations**

Connections between existing systems

03 **Automation**

Approvals, routing, and alerts

04 **Data**

Reporting and decision support

05 **Operations**

Project, asset, and workforce tools

06 **Revenue**

Lead and customer workflows

07 **Governance**

Access control and audit records

08 **Visibility**

Current status and exceptions

01**PRODUCT AND INTERNAL SOFTWARE**

Software designed for your operation.

CUSTOM APPLICATIONS

Customer-facing products

We build portals, forms, quoting tools, and responsive web applications.

INTERNAL SYSTEMS

Operations software

We build tools for scheduling, inventory, service work, and project tracking.

Production stack

Modern web applications backed by Python and SQL.

Deployed in containers with authentication and role-based access.

We can also work within a client-required stack.

02**OPERATIONAL AUTOMATION**

Every task has an owner, a status, and a record.

We automate repeatable handoffs while keeping approvals and exceptions visible to the people responsible for them.

01**Route**

Send work to the right person based on clear rules.

02**Track**

Show current status, due dates, and blocked work.

03**Record**

Keep approval history and supporting evidence together.

CALL WORKFLOWS

Turn calls into assigned follow-up with a transcript, summary, and due date.

Use company data in everyday decisions.

Bring records from forms, business systems, documents, and calls into one usable data model.

DATA

01

Collect and organize

02

Find

Search documents and retrieve the supporting source.

03

Review

Use AI for a first pass, then route uncertain results to a person.

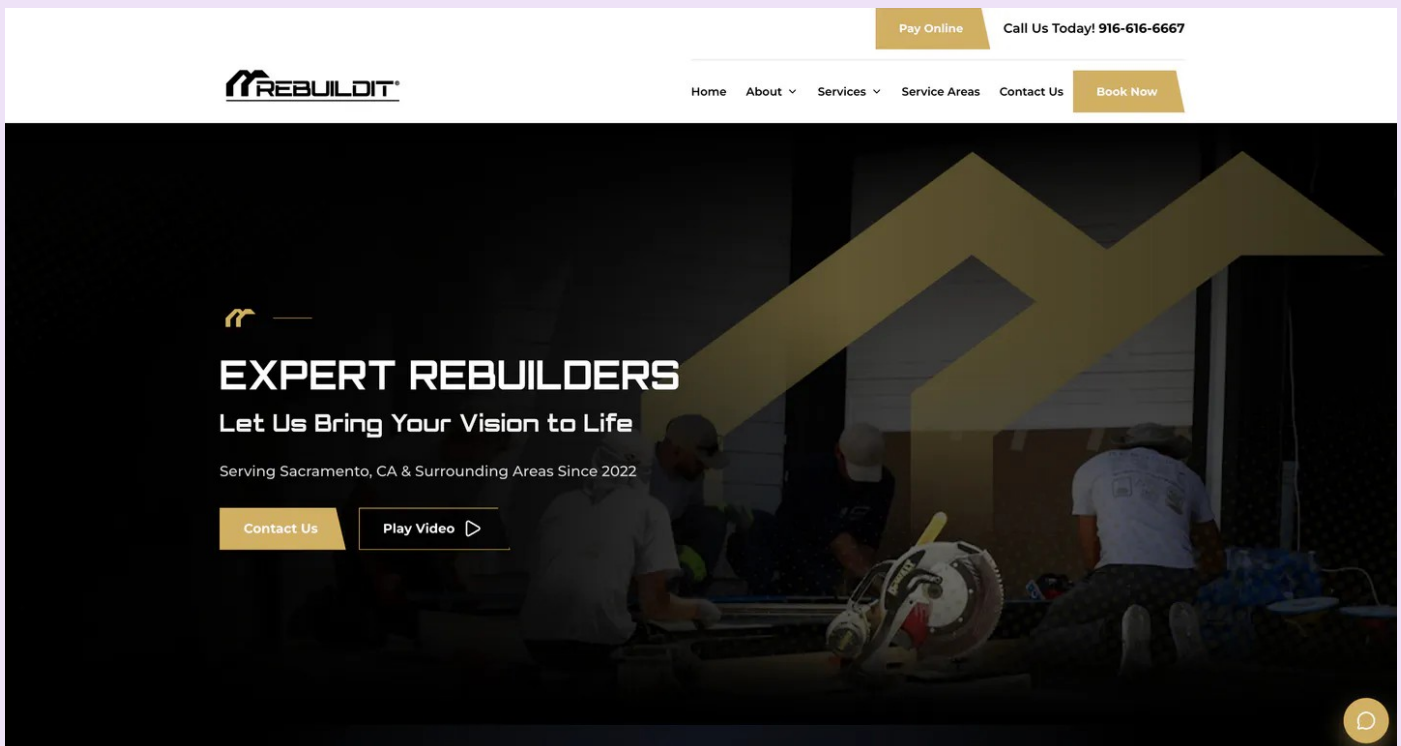

Fits your model policy

We can use your approved provider or deploy an open-weight model.

04

REBUILDIT INC.

One system for office and field work.

CONSTRUCTION OPERATING SYSTEM

Work is tracked from the first inquiry through the active project. The same workspace supports the back office.

REBUILDITINC.COM

Run critical systems on a controlled foundation.

SECURITY CONTROLS

Sign-in controls
Role-based access
Restricted records
Backups
Audit logs

We document these controls so they can be reviewed and maintained.

Cloud deployment

Deploy to the cloud environment your team is prepared to operate.

System integration

Connect current software through supported APIs and controlled data transfers.

Management visibility

Show current status, blocked work, and items that need attention.

06

FORWARD-DEPLOYED DELIVERY

Prove one workflow in 30 days.

01

Operational review

Choose the workflow, users, records, access rules, and success measure.

02

30-day pilot

Put a working version into use with a small group and collect direct feedback.

03

Ongoing delivery

Improve the pilot and add the next workflow when the first one is stable.

Which workflow is slowing your team down?

We will scope a pilot and put it into use with your team.
