

USATII MEDIA

Capability Statement | Digital Modernization, Operations Software, Enterprise Data, AI, and Forward-Deployed Engineering

VAU SOLUTIONS, LLC d/b/a USATII MEDIA | Operating Location: Rochester, NY | Vladislav Usatii, Managing Member | 701-864-0782 | vlad@usatii.com | www.usatii.com

CAPABILITY SUMMARY

Usatii Media builds operations-critical internal software for governments, agencies, contractors, and enterprises. The firm combines forward-deployed engineering with custom data, workflow, telecom, HR, payroll, training, inventory, compliance, AI, and dashboard systems. Our work turns real-world assets, employees, calls, jobs, records, approvals, and transactions into structured software objects, governed workflows, auditable decisions, and usable operational dashboards.

FORWARD-DEPLOYED OPERATING MODEL

- **Embedded discovery:** work directly with operators, managers, administrators, and employees to understand real workflows before software is finalized.
- **Operational ontology:** model the organization as objects, relationships, events, permissions, approvals, constraints, and actions, so software reflects how work actually moves.
- **Implementation-first delivery:** build, deploy, train, support, and iterate on working systems instead of stopping at requirements documents or prototypes.
- **Pilot-first procurement:** start with one high-friction workflow, prove the data model, then expand into a broader internal operating system.

ENTERPRISE SYSTEMS WE BUILD (EXAMPLES)

- **Inventory and asset management:** materials, equipment, vehicles, serialized assets, tools, warehouses, job-site allocations, check-in/out, reorder alerts, vendors, warranty records, and cost-to-job tracking.
- **Payroll, HR, and employee training:** timecards, job codes, payroll preparation, onboarding, employee portals, policy acknowledgments, role-based training, safety records, credential tracking, PTO, incident forms, and manager approvals.
- **Operations and project management:** scheduling, dispatch, service tickets, job costing, project status, field updates, internal reporting, SLA tracking, punch lists, change orders, and exception management.
- **Finance and administrative workflows:** invoice support, expense capture, budget-versus-actual reporting, approval chains, reconciliation support, operational KPIs, and subscription-software consolidation.
- **Compliance and audit workflows:** structured forms, required fields, decision logs, approvals, branching workflows, versioned records, evidence capture, audit exports, and employee attestations.
- **CRM, marketing, and revenue operations:** lead intake, attribution, dashboards, call routing, campaign telemetry, non-PII investigative tracking, quoting workflows, and customer follow-up systems.
- **Vendor and subcontractor workflows:** subcontractor onboarding, certificate tracking, policy checks, approval status, work assignment, document collection, and renewal reminders.

DATA, AI, AND DECISION INFRASTRUCTURE

- **Data collection and ingestion:** forms, APIs, SQL databases, spreadsheets, call systems, webhooks, legacy exports, cloud storage, and third-party software sources.
- **Structuring and governance:** canonical schemas, entity resolution, relational models, event logs, validation rules, access policies, lineage, provenance, and retention-aware records.
- **Reading and extraction systems:** PDF/document parsing, invoice extraction, contract/policy reading, training-material conversion, record indexing, search, and structured output review.
- **Auditability and visibility:** ACLs, RBAC, least-privilege access, audit logs, status histories, workflow branches, immutable events where appropriate, and manager-readable reporting.
- **AI-assisted operations:** call summaries, classification, extraction, RAG, internal knowledge assistants, QA review queues, anomaly flags, and human-in-the-loop decision support.
- **Model/vendor flexibility:** OpenAI, Anthropic Claude, Google Gemini/Vertex AI, Microsoft Azure OpenAI/Azure AI Foundry, AWS Bedrock, Hugging Face/open-weight models, Ollama, vLLM, LangChain, LlamaIndex, and GitHub OSS tooling.

OPERATIONAL COMMAND CENTERS

- **Executive and manager views:** real-time status, bottlenecks, task aging, inventory risk, payroll readiness, call volume, project performance, compliance exceptions, and revenue/lead movement.
- **Employee-facing systems:** simple portals for field staff, office staff, managers, and executives, with permissions, assigned workflows, mobile-friendly forms, and role-specific dashboards.
- **Decision support:** rules, triggers, workflow branching, approvals, alerts, recommendations, and AI-generated summaries that remain reviewable by human operators.

TELECOM, CALL CENTER, AND COMMUNICATIONS (EXAMPLE)

- **Asterisk/PBX systems:** open-source call center workflows, IVR, queues, call routing, PBX administration, VoIP.ms integrations, call records, call summaries, and operational dashboards.
- **Voice-to-workflow integration:** convert calls into tickets, leads, tasks, QA records, summaries, escalations, searchable history, and measurable service outcomes.

TECHNICAL DELIVERY

- **Primary stack:** Next.js, React, Python, FastAPI, PostgreSQL, SQL, JavaScript/TypeScript, Docker, Linux/VPS, cloud deployments, API integrations, and custom authentication/authorization.
- **Language-agnostic engineering:** able to work across client-required languages, frameworks, databases, and infrastructure patterns when modernization requires it.
- **Deployment environments:** AWS, Linode, Vercel, DigitalOcean, Namecheap, GoDaddy, VPS/server environments, and hybrid online/offline system patterns where feasible.
- **Security controls:** authentication, authorization, ACLs, RBAC, backups, audit logging, secure cloud deployment, least-privilege design, and support for future SOC 2 readiness work.

RELEVANT PAST CASE STUDIES

- **RebuildIt Inc. - Construction/Remodeling:** piloted and expanded production internal tooling for inventory, telecom, operations, finance, HR, employee workflows, reporting, AI-assisted summaries, SQL-backed server work, and full-stack web infrastructure. The engagement moved key workflows away from fragmented subscription software and into in-house operating systems.
- **Orlando Town Construction - General Contracting:** delivered website development, SEO, advertising support, internal tooling, contractor-facing operations modernization, lead generation workflows, and business-system improvements for a construction contractor.

References available upon request.

PROCUREMENT-FRIENDLY ENGAGEMENTS

- **Operational Software Audit:** assess workflows, systems, data movement, access-control needs, manual bottlenecks, audit requirements, risk, and modernization opportunities.
 - **30-Day Pilot:** build one usable workflow, module, dashboard, integration, or internal tool that demonstrates the larger system architecture.
 - **Embedded Modernization:** 90-day to 2-year FDE engagement for internal operating systems, compliance workflows, AI/data tooling, integrations, employee systems, and legacy or subscription-heavy workflow replacement.
- Required certificates of insurance can be provided prior to contract execution and commencement of work as required.*

COMPANY DATA

Primary NAICS: 541511 Custom Computer Programming Services; 541512 Computer Systems Design Services; 541519 Other Computer Related Services. Additional relevant NAICS: 541611 Administrative Management and General Management Consulting Services.

Relevant NIGP categories: 920-40 Computer Programming; 920-64 System Implementation and Engineering; 920-45 Software Maintenance and Support; 920-46 Software Updating/Upgrading; 920-65 System Requirements/QA Review; 920-05 Application, Infrastructure, Hosting, and Cloud Computing.

RELEVANT CATEGORIES (ROCHESTER)
